

VARIABLES FOR NUMBERS

Assignment # 3
JAVASCRIPT

1. Declare a variable called *age* & assign to it your age. Show your age in an alert box.

2. Declare & initialize a variable to keep track of how many times a visitor has visited a web page. Show his/her number of visits on your web page. For example: "You have visited this site N times".

3. Declare a variable called *birthYear* & assign to it your birth year. Show the following message in your browser:

4. A visitor visits an online clothing store www.xyzClothing.com . Write a script to store in variables the following information:

- a. Visitor's name
- b. Product title
- c. Quantity i.e. how many products a visitor wants to order

Show the following message in your browser: “**John Doe** ordered **5 T-shirt(s)** on XYZ Clothing store”.

John Doe ordered **5 T-shirt(s)** on XYZ Clothing store

-- END --
